INDUSTRIAL COATING / PROJECT SELECTION SHEET

ZINTEX BETONEX OIL-1040

one-component specialty protective coating developed for carbon steel in chemical-processing facilities.

Product family	Concrete and flooring systems
Material type	Specialty protective coating
Binder family	Specialty
Components	One-component
Suitable substrates	carbon steel, concrete
Typical project contexts	chemical-processing facilities, industrial floors and warehouses, industrial fabrication and equipment
Supply format	Industrial packaging confirmed for the order

Selection and specification

Specify the exposure, surface-preparation standard, target coating system, colour, application method and destination. ZINTEX will confirm whether BETONEX OIL-1040 fits the project or propose a made-to-order alternative.

- State the service environment, exposure type and expected maintenance interval.
- Provide substrate condition and the required surface-preparation standard.
- Specify application equipment, site conditions, colour and finish requirements.
- Confirm destination, order volume, packaging, labelling and documentation needs.

Application parameters

Surface preparation, mixing ratio, induction time, application viscosity, nozzle selection, dry-film thickness, theoretical spreading rate, drying time, overcoating interval and temperature window are confirmed in the approved project specification and batch documentation. Do not select these values by analogy with another product.

System compatibility

Use ZINTEX BETONEX OIL-1040 only within a technically reviewed coating system. Compatibility with primers, intermediate coats, topcoats, thinners and previously applied materials must be confirmed before work begins.

Safety, storage and transport

Professional industrial use only. Obtain the current Safety Data Sheet before handling. Follow local occupational, fire, environmental, packaging and transport requirements. Keep containers closed and store them under the conditions stated in the batch documents. Shelf life is confirmed for the supplied batch.
