

INDUSTRIAL COATING / PROJECT SELECTION SHEET

ZINTEX MASTIC ALK-1071

one-component alkyd protective mastic developed for carbon steel in marine and port infrastructure.

Product family	Mastics and waterproofing
Material type	Alkyd protective mastic
Binder family	Alkyd
Components	One-component
Suitable substrates	carbon steel, wood
Typical project contexts	marine and port infrastructure, industrial fabrication and equipment, industrial floors and warehouses
Supply format	Industrial packaging confirmed for the order

Selection and specification

Specify the exposure, surface-preparation standard, target coating system, colour, application method and destination. ZINTEX will confirm whether MASTIC ALK-1071 fits the project or propose a made-to-order alternative.

- | State the service environment, exposure type and expected maintenance interval.
- | Provide substrate condition and the required surface-preparation standard.
- | Specify application equipment, site conditions, colour and finish requirements.
- | Confirm destination, order volume, packaging, labelling and documentation needs.

Application parameters

Surface preparation, mixing ratio, induction time, application viscosity, nozzle selection, dry-film thickness, theoretical spreading rate, drying time, overcoating interval and temperature window are confirmed in the approved project specification and batch documentation. Do not select these values by analogy with another product.

System compatibility

Use ZINTEX MASTIC ALK-1071 only within a technically reviewed coating system. Compatibility with primers, intermediate coats, topcoats, thinners and previously applied materials must be confirmed before work begins.

Safety, storage and transport

Professional industrial use only. Obtain the current Safety Data Sheet before handling. Follow local occupational, fire, environmental, packaging and transport requirements. Keep containers closed and store them under the conditions stated in the batch documents. Shelf life is confirmed for the supplied batch.
