

INDUSTRIAL COATING / PROJECT SELECTION SHEET

ZINTEX RAILPRO WAGON

supplied as a coordinated kit epoxy special-purpose coating developed for carbon steel in transport equipment and machinery.

Product family	Special-purpose coatings
Material type	Epoxy special-purpose coating
Binder family	Epoxy
Components	Supplied as a coordinated kit
Suitable substrates	carbon steel
Typical project contexts	transport equipment and machinery, maintenance and field repair
Supply format	Coordinated kit

Selection and specification

Specify the exposure, surface-preparation standard, target coating system, colour, application method and destination. ZINTEX will confirm whether RAILPRO WAGON fits the project or propose a made-to-order alternative.

- | State the service environment, exposure type and expected maintenance interval.
- | Provide substrate condition and the required surface-preparation standard.
- | Specify application equipment, site conditions, colour and finish requirements.
- | Confirm destination, order volume, packaging, labelling and documentation needs.

Application parameters

Surface preparation, mixing ratio, induction time, application viscosity, nozzle selection, dry-film thickness, theoretical spreading rate, drying time, overcoating interval and temperature window are confirmed in the approved project specification and batch documentation. Do not select these values by analogy with another product.

System compatibility

Use ZINTEX RAILPRO WAGON only within a technically reviewed coating system. Compatibility with primers, intermediate coats, topcoats, thinners and previously applied materials must be confirmed before work begins.

Safety, storage and transport

Professional industrial use only. Obtain the current Safety Data Sheet before handling. Follow local occupational, fire, environmental, packaging and transport requirements. Keep containers closed and store them under the conditions stated in the batch documents. Shelf life is confirmed for the supplied batch.
